

**AHANA IMPLEMENTED MAINFRAME
AUTOMATION TO REDUCE COSTS**

Our Client:

Leading Japanese Logistics Company

Ahana
Implemented
Mainframe
Automation to
Cut Costs for a
Leading Japanese
Logistics Company.

The Challenge

The client dealt with repetitive manual processes like the CHA Billing/ Trucking/Warehousing/Removals process, which were prone to errors due to their labor-intensive nature.

Ahana's Solution

- Implemented a bot to read input files and log into the client's in-house information system.
- Entered MAWB numbers, downloaded IGM files, and moved them to a shared folder.
- Logged into the ERP software, entered Origin Agent and Custom House details, and generated Annexures.
- Performed CGM filing for specific MAWB numbers.
- Logged into the VNC server and Signing Tool to complete IGM filing.

Significant Impact

- **Resource Optimization:** Reduced staff count from 14 to almost 0, eliminating the need for full-time employees from seven branches.
- **Cost Optimization:** Significantly reduced operational costs due to decreased staffing requirements.
- **Time Optimization:** Streamlined and accelerated the process, reducing errors and improving efficiency.
- **Precision/Error-free Handling:** Ensured accurate and consistent processing, leading to a decrease in error rates.

Thank You.
